Every year, approximately 650 children in the Netherlands develop cancer and one in four children with cancer still dies as a result of this disease. That is why, more than ten years ago, parents, healthcare professionals including myself, took the initiative to set up a single national children's oncology center. This initiative culminated in the Princess Máxima Center for pediatric oncology. The Center is unique in that it brings together all the strands of highly complex care and research for children with cancer. Our aim is to cure as many children and adolescents

with cancer as quickly possible, while maintaining their quality of life, so that it will be easy for them to find their place in society.
